CHAPTER LIMITS AND THE FOUNDATIONS OF CALCULUS 2. For every $m > m_0$, the function $f(x) - [f(x_0) + m(x-x_0)]$ changes sign from positive to negative at X_0 . If such a number m_0 exists, we say that f is differentiable at X_0 and we write $m_0 = f'(x_0)$. We will now prove that our definition of the derivative coincides with the definition found in most calculus books. This is a major revision of the first edition of Foundations of Infinitesimal Calculus [Keisler], which was published as a companion to the first edition of Elementary Calculus, and has been out of print for over twenty years. A companion to the second edition of Elementary Calculus was never written. We wrote this book of foundations in part to provide a convenient reference for a student who might like to see the "theorem - proof" approach to calculus. We also wrote it. Finally we got the Foundations of the calculus file.
