Nanotechnology is scientific and research development at the atomic, molecular or macromolecular levels in a dimension range of 1 to nm; the fabrication and application of the structures, equipment, and systems which involve unique characteristics and new applications because of their small or medium dimensions; and the potential for (materials and processes) the control and management of atomic . Functional nanomaterials appear in our daily lives. These materials mainly include nanocomposites, nanopowders, nanoparticles and nanocoatings. Nanotechnology enables the creation of structures which do not exist in nature, those which cannot be produced by conventional chemistry.
